## Sign Systems

## OVERHEAD SIGNS

Clearly identify specific departments with visually dominant Overhead Signs. Complement existing room signs and floor directories within your facility. Achieve ADA (American with Disabilities Act) compliance with contrasting colors, type styles and graphics. Overhead Signs are flexible, functional and effective in any public and private facility.

With individual panels weighing less than 7 pounds, Overhead Signs are easy to install. Signs are easily affixed to any standard drop-ceiling, as well as other ceiling finishes. Flush mounted and suspended sign installations are quick and easy. Overhead placement provides visibility and communication for effective pedestrian traffic flow.

Fabricated from expanded PVC, sign panels are durable and dimensional. Overhead panels and cubes are available in a variety of stock and custom sizes, finished or unfinished.

Available in your choice of radius or square corners, overhead panels and cubes can be finished to match any existing environmental or sign system specification. Finished overheads include eye-catching, vivid colors and easy to read graphics. Single-sided, double-sided or changeable message applications are also available. For changeability, simply specify an optional clear acrylic lens with changeable message inserts.

Overhead Signs are proven communicators that positively impact pedestrian traffic flow. Impact one's sense of direction with Overhead Directionals.

- Threaded Studs
- Airline Cable
- Mounting Plate

#### Summary: 2010 ADA Standards for Accessible Design

Signs must conform to rule 1 for identification signs concerning non-glare finish and contrast. Signs cannot be constructed of shiny metals, highly polished woods, or shiny plastics. They cannot utilize high gloss paints or vinyls. Both upper and lower case characters can be used. Signs which are suspended from ceiling or projected above 80 inches from the finish floor must have characters at least three (3) inches in height.
